

Steel Dual Playground Basketball System

Price \$5,460.00

Highlights:

- Dual goals offer space-saving gameplay
- Suitable for adult and youth recreation
- Available with a variety of backboards
- Built to last with an anti-corrosion finish

No need to take turns because two can play at that game with the Steel Dual Playground Basketball System by Gared! It is a truly unique unit ideal for outdoor spaces like playgrounds, campgrounds and other recreation centers. This dynamic system is suitable for both youth and adult recreation purposes. It is designed for use with glass, acrylic, polycarbonate and steel backboards along with a breakaway or stationary goal. A six inch square single main post holds an extension arm on each side with galvanized and powder-coated braces extending to the upper mounting points of the backboard. The post and extension arms are hot dip galvanized steel and then powder-coated black for extended protection from corrosion. This space saving design allows many games to be played at once, optimizing the play area and offering hours of game play.
