

Wall Pad Attachment Z-Clip

Price \$30.00

Highlights:

- Creates an easy removal process for wall padding
- Made from aluminum that can be cut to size
- Suitable for standard, corner and column padding
- Contributes to the safety of gymnasiums

Proper padding for interior walls and beams is important for the safety of athletes for a variety of sports. The Wall Pad Attachment Z-Clip by Gared is an alternative mode of attachment for wood-backed wall pads without the need for nailing lips. This method leaves no exposed screws or bolts and makes removal or replacement easy. Just secure the z-clips to the wall in whatever way is appropriate for the surface and secure the clips to the back of the wall padding. Now you can slide the padding on and off of the wall effortlessly. This is ideal for school gyms or recreational centers that cater to multiple sports and events that may or may not require padding. The clips are made from six-foot lengths of aluminum but can be easily cut to size to fit many types of pads. Use in conjunction with PSS, corner and column padding to prioritize safety and maintain an attractive and uniform appearance.
