- Provides a unique core workout for teens and adults

Age Group: Adult

COMPLIES With:

ASTM F1487-17

CPSC PUB #325

Standing on the Freestanding Balance Board functions as a test of balance for all who use it. Mounted atop two large steel springs, the horizontal platform is molded with indentations that help with foot grip. Although the platform is secretly attached to the springs, the coils are spread enough to allow for a bouncing and wobbling motion. Users must keep their balance, creating a fun challenge and facilitating a beneficial core workout. The Balance Board stands a foot above the ground, and includes an in-ground mount to prevent slippage and accidents. There's an inherent competitiveness, as friends and family track who can stay on the Single Balance Board the longest. Users will find that remaining upright on the Balance Board is not as easy as it may seem at first. Add the Freestanding Balance Board to your playground or outdoor space for a fun way to stay active.
