Age Group: 5 to 12 years

Capacity: 100+

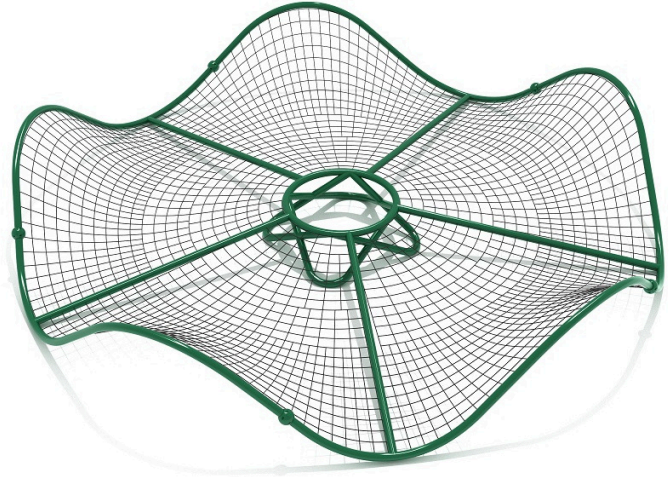

Footprint: 48' 0" X 48' 0"

Use Zone: 60' 0" X 60' 0"

COMPLIES With:

ASTM F1487-17

CPSC PUB #325

The Terrestrial Transit Net Climber Disk is a massive climbing structure that offers various ways to play on it with its unique and sleek design. Like other climbers offered by AAA State of Play, the Terrestrial Transit features a net made from synthetic ropes with extremely high tensile strength, which can sustain multiple climbers at once without the netting wearing or fraying under extensive weight and use. There's an inherent challenge for kids to crawl into the center of the Terrestrial Transit Net Climber Disk, made even more thrilling when multiple children are playing on it at once. Since the Terrestrial Transit Net Climber Disk stands at around 8 feet high, kids can even treat the netting as a set of monkey bars, swinging and climbing outward towards the edge or inward towards the center of the structure. Overlapping galvanized steel bars at the center also enable kids to venture through the structure, providing a feeling akin to going into a tunnel. The Terrestrial Transit Net Climber Disk is a great way to facilitate a truly unique playground experience, making it a great option for any outdoor site.
