CPSC PUB #325

Put the pedals to the metal with the Accessible Stationary Hand Bike, a unique piece of outdoor fitness equipment that's great for all ability levels. Standing at around three feet high, the Accessible Stationary Hand Bike provides a simple, convenient means for users to exercise their forearms and other upper-body muscles. What's more, since the Accessible Stationary Hand Bike is situated at such a low height, users in wheelchairs can simply wheel themselves up to the station and use the pedals to get a great upper-body workout. Like other outdoor fitness equipment, the Accessible Stationary Bike uses a sturdy mount, making it resilient and durable in the face of inclement weather. Thanks to its novelty, the Accessible Stationary Hand Bike makes a great addition to outdoor fitness circuits, and with the addition of a resistance component, workouts can be further improved.
