Age Group: Adult

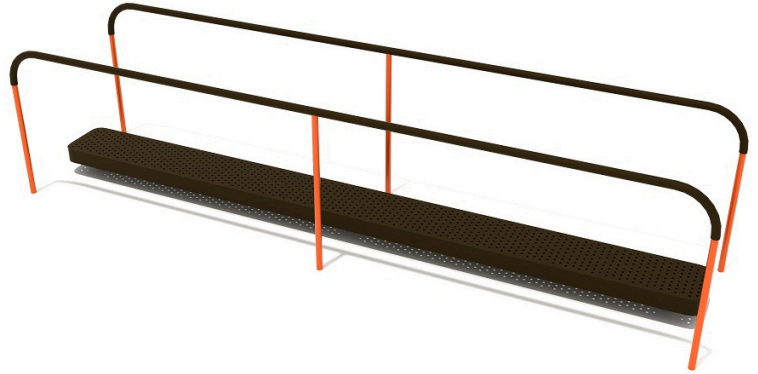

Footprint: 12' 10" x 3' 6"

COMPLIES With:

ASTM F1487-17

CPSC PUB #325

ADA Compliant

Balance equipment is a mainstay of playgrounds and outdoor spaces across the country, and for good reason. The Assisted Balance Walk with Rails emphasizes safety while providing a means by which movement-challenged adults can improve their balance and motor skills. With a relatively low deck height, the Assisted Balance Walk with Rails offers safety and security to users, keeping them from losing their balance and falling from a great height. Additionally, those with leg injuries can make great use of this equipment as a supplement to physical therapy, as the railings provide added stability to mobility-challenged users. The Assisted Balance Walk with Rails also makes a great addition to an outdoor fitness circuit, as its straight and narrow pathway can connect one area of the circuit to another. Adding the Assisted Balance Walk with Rails to your outdoor area won't just make it better, but also more inclusive.
