Fall Height: 18"

The Stand-N-Spin is an inventive attraction that will capture the attention of any child who lays eyes on it. Its purpose is to enable users to effortlessly rotate in one spot by redistributing their weight. They can either kick off with one foot or have a friend help them initiate the movement, but the rest is left to the force of inertia. The spinning mechanism includes a non-slip surface, a partial bar enclosure, and multiple handrails to guarantee the safety of users, even when they spin as quickly as the momentum allows. This is a self-supporting installation that requires no additional reinforcement or structures. The spinning mechanism and two supporting posts measuring 3.5 inches in diameter can be purchased in a range of vibrant color combinations.
