ADA Compliant

Complete with a Child Adaptive Swing Seat, the Elite Series 3.5 inch Arch Post Child Adaptive Swing offers safety and fun to kids on the playground. Adaptive Swings are gaining popularity across the country, and it's easy to see why; their safety-centric design enables children of all ability levels to remain safe and secure while an adult or friend pushes them through the air, creating good times and fond memories for all. While children with disabilities or mobility-related issues may struggle to use typical swing seats, the Child Adaptive Seat helps these children by offering a high headrest, armrests, and a five-point safety harness, which combine to provide a swing experience like none other. The Elite Series 3.5 inch Arch Post Child Adaptive Swing works great as a standalone swing, and an additional bay can be appended to double the fun.
