This popular tire swing features a five inch frame and top rail, the largest size used on playground equipment, resulting in the strongest construction available. Each tire swing bay includes a roto-molded tire with galvanized chain and hardware. For safety, each tire swing must have a single bay to itself. In other words, a tire swing takes up the same space on a swing frame as two belt seats. Contact our staff about creating a swing with tires and belts on a single connecting row of swings. Optional coated chain is available for this swing at an additional up-charge. The dimensions are as follows: 5" legs, 5" top rail, 8' installed height.
