

Water Play Rubber Surface

Price \$0.00

COMPLIES With:

ASTM F1487-17

CPSC PUB #325

The Water Play Rubber Surface is the latest surface on offer, which can provide long lasting protection within your playground. The surface was designed to meet the requirements of water parks or playgrounds that utilize water. Basically, this surface makes it much harder to slip on the ground even when there is water present. The surface can also resist chlorine, making it a robust, durable surface that will provide a high quality service for a long time to come. You will usually apply this surface to a concrete subsurface, and a minimum surface application of 750 square feet will be required if you are to use this soft rubber surface. It's ideal for simple, effective protection for children. Do not miss out on the chance to purchase a quality non-slip surface for water parks.
