

Foam Drain Tiles for Mulch

MSRP \$45.00

SALE \$32.00

Highlights:

- Enhances drainage beneath wood mulch surfacing
- Provides additional cushioning to the surface
- Increases the lifespan of wood mulch
- Made with a durable and affordable polyethylene foam

Foam Drain Tiles assist in drainage and fall protection when combined with our Engineered Wood Fiber. The base panels feature milled drainage channels in the bottom. A panel consists of a durable cut of black polyethylene foam. The panels are meant to be installed on top of subsoil beneath the loose-fill mulch surfacing. If the subsoil is loose or sandy, a base layer of DuraLiner is recommended as a subsoil stabilizer under the foam tile. These tiles are available in one size only, 35" x 48" x 1".
