

DuraLiner Geotextile Fabric

Price \$290.00

Proper surfacing is an integral part of any play area. Almost 80% of injuries sustained at playgrounds are caused by falls from structures such as swings and climbing bars. The best way to reduce the severity of playground falls is to make sure the play area is covered with a durable surface designed to absorb impact, like wood chips, shredded rubber, and other surface options. But when using surfacing materials such as wood, it's important to consider proper drainage to extend the life of the material, and that's where DuraLiner geotextile fabric comes in.

DuraLiner geotextile fabric works in conjunction with our engineered wood fiber to create a playground surface unlike those of any other commercial brands. This geotech fabric is designed to protect the wood fiber from excessive water damage that comes with heavy storms. High-Quality DuraLiner Geotextile Cloth

Zeager Bros. engineered DuraLiner geotextile cloth to be permeable so that water can drain away from your play area. DuraLiner fabric extends the life of your playground surface, and the geotextile cloth also prevents weeds and other seedlings from taking root in loose-packed materials, adding longevity to the wood fiber. Invest in DuraLiner fabric along with engineered wood fiber to help kids stay safe on your playground!

At AAA State of Play, we have DuraLiner geotextile fabric for sale at great prices, so it's easy to create a long-lasting and safe playground surface. This special material is both cost-effective and simple to install. [\[Read More\]](#)
