Single-Seat Swing Frame

Being able to play on the playground should be open to all, no matter what their ability level might be, and that's why we carry products like this single swing frame, which can easily be fitted with a variety of swings or platforms. This single-seat swing frame is sturdy enough to hold a swing suitable for young children or adults alike, and it's available as a portable frame or an in-ground stationary frame.

The SportsPlay Equipment single swing frame has an 8-foot-square footprint, and it's a highly adaptable piece of equipment that can be fitted with a variety of seats. For a swing suitable for the youngest children, attach a large supportive seat like the Cubby Molded Swing Seat. This single swing frame will accommodate a wide array of heavy-duty adaptive swing seats that can hold and support children of all abilities, and it can also be fitted with a wheelchair swing platform.

At AAA State of Play, we're committed to helping our customers make their playground accessible for people of all abilities as well as comply with federal law. The Americans with Disabilities Act (ADA) protects people with disabilities from discrimination and requires that all state and federal play areas are accessible to those with disabilities. The basic compliance rules state that a playground should have ramps and paved travel routes free of impediments as well as appropriate surfaces beneath a range of accessible play options.
