Easily build chest muscles with the Royal Double Chest Press. Many muscles benefit heavily from using this unit including the pectoralis major and minor, the triceps brachii, and the anterior deltoid. Chest muscles are some of the most important in the entire body which makes maintaining them an incredibly important responsibility. This unit's intuitive layout is easy to pick up and get started. If confused, the built-on instructional guide is an informative tool that will show users the proper ways to maximize their physical benefits. The Royal Double Chest Press is made of powder-coat painted steel with rotationally molded plastic seats providing long-lasting durability to the unit and that keeps individuals engaged for longer. This structure is designed to hold its own against many different types of weather. Such a quintessential piece of equipment should be included in any outdoor exercise area.
