COMPLIES With:

ASTM F1487-17

CPSC PUB #325

Our Allen Wrench Clevis Connector with Special Head is specifically designed to fit with our D Shackles, H Shackles and any of our commercial swing hangers making it an essential tool for playground maintenance. This Allen Wrench is different from its cousin that can be found at local hardware stores because of the hollowed out center point. All of our swing hardware is designed with this simple system to deter potential vandals from loosening important points in the hardware. A swing is put under daily stress from its innate design that sends children hurtling back and forth much to their joy. This addition to all of the swing hardware gives the entire swing a higher degree of safety. The tool comes with most of our swing seat packages to make installation even easier. Sometimes there needs to be a spare or two for maintenance workers making this a great low price addition to any playground maintenance kit.
