The Standard Style Trash Receptacle by Webcoat offers a classic, timeless design that will be sure to keep your venue free of litter. It is available in 32 and 55-gallon models so you can pick a size that will best suit your park, school, or outdoor area. This receptacle is made of #9 steel expanded metal that ensures that this structure will endure continual use for years. This metal is then coated with a thick, textured polyethylene color coating that will make it match to your area and extend the life of the trash receptacle. Complete this equipment purchase with a liner and a flat or dome top, which can be made of plastic or metal material. In-ground and surface mounts are available to attach the receptacle to the ground. The lid, liner, and mounts are all sold separately. Talk to a sales representative for more details.
